Optum

HCC Analyzer

Take your risk adjustment coding and auditing to the next level

The HCC Analyzer from Optum revolutionizes the HCC risk adjustment process for coders, billers and auditors by providing advanced tools to enhance code accuracy and documentation. This innovative tool allows for immediate identification of applicable HCC codes across various model types (CMS, ESRD, RX, HHS-commercial) and facilitates greater clarification through a unique calculator that displays side-by-side HCC coding scenarios. Additionally, the HCC Analyzer introduces industry-first "HCC edits," which highlight clinical and coding documentation improvement opportunities. Users also benefit from streamlined access to ICD-10-CM code guidelines, AHA Coding Clinic references, CDI support, and more, enabling both coding compliance checks and HCC reviews in just 2 clicks. This integration ensures not only clean claims but also a comprehensive review of HCC codes for enhanced documentation accuracy — all in one efficient process.

Key features and benefits:

The new HCC Analyzer offers multiple features that identify HCC codes and content as well as enable a thorough analysis of HCC processes and documentation through enhanced review of coding scenarios. Additionally, our exclusive HCC coding edits and a comprehensive calculator facilitate side-by-side comparisons of different scenarios, providing deep insights into diagnosis codes and HCC conditions that might otherwise go undocumented or unidentified. Below is a detailed list of these features and the benefits they offer.

- **Comprehensive HCC calculator (multiple model types including HHS)** — Review RAF (and PLRS for HHS) scores for multiple model types and reporting years with accurate model type information in an easy-to-use calculator. For CMS model types, users can also review resulting PMPM due to RAF changes, and can see, with full transparency, what goes into the RAF scoring.

- **HCC Side-by-Side comparison calculator*** — Compare side-by-side different HCC scenarios based on clinical documentation improvement and code selection to view potential changes in RAF scoring and PMPM from your improved coding and documentation (PLRS for HHS).

Optum Edge: Optum exclusive features are indicated with an *.

Improve your HCC coding capabilities today

May only be purchased with a new or existing Optum Encoderpro.com subscription.

- **HCC coding analysis with HCC edits*** — Similar to claim review, our Optum HCC coding analysis provides clinical and coding documentation improvement edits that will help users to "know what they don't know" about the HCC diagnosis codes they are billing, and the different clinical issues based on the diagnosis codes and the conditions they represent. This gives users opportunities to review their documentation processes with their clinicians to accurately capture the patient's clinical presentation.

- **ICD-10-CM single page display of all guidelines for multiple codes*** — Allows coders to see all the guidelines for multiple diagnosis codes on a single page. No more clicking back and forth from codes to guidelines.

  For any HCC diagnosis codes, you can view:
  - Chapter, section, range and code notes
  - Coding guidelines such as: Includes, Excludes 1 or Excludes 2, Code First or Use Code Additional Code
  - Coders own user notes and AHA Coding Clinic references

- **HCC code searching capabilities*** — Search among both ICD-10-CM HCC and non-HCC, or HCC only, in both code searching capabilities or within the ICD-10-CM index. Immediately identify the HCC categories for all HCC model types (CMS, ESRD, RX and HHS-Commercial HCC).

- **Enhanced model type identification** — Improved exposure and display of model types based on reporting year and version.

- **Both Claim Review and HCC code review in one single tool** — Easily add diagnosis codes to the HCC calculator from code ranges, code detail pages, favorite lists and the Optum physician compliance editor (claim scrubber) for fast and efficient claim review and HCC coding review.
